

Meeting Notes

By Jay Bell

July 16, 2026

1 Meeting Notes: 16th July 2026

1.1 Attendees

- Jay Bell
- Christos Politis
- Nada Philip

1.2 Meeting Summary

- Reviewed the initial DAG Casual Model and its assumptions through the GUI interface.
- Agreed on the need for a clear explanation of the model and how it predicts the results.
- Planned to review the dataset variables to align with variable names mentioned by Helmut Modjtahedi.

During the meeting, Jay talked about the current progress of the Data Exploration and model initialisation. Jay explained the creation of the dataset by merging multiple NHANES tables and the importance of understanding the variable prefixes for proper analysis. The team agreed to document the process and findings in a clear and concise manner. Nada suggested that we should also consider the potential of recurring patients and how to ensure we are:

1. not double counting them and
2. if they are indeed the same patient from different years.

Jay mentioned that the SEQN variable is unique to each participant and could possibly be used to identify recurring patients across different survey years, but would need to be explored before confirming.

Jay also mentioned that Project is stored in the following location:

- GitHub Repository: <https://github.com/JayNightmare/KERI>

– Dataset Location in Codebase: `api/nhanes_data/nhanes_merged.csv`

- OneDrive Location: https://kingstonuniversity-my.sharepoint.com/my?id=%2Fpersonal%2Fk2119852_kingston_ac_uk%2FDocuments%2FResearch%2FCancer%20Research&viewid=e945b976-0104-429e-a0f9-fb80856da682
